

## Homework E.12 - Solution

V.8  $F_{\max} = 15 \text{ N}$

select  $z_e = \frac{L}{2}$

(b)

$$\frac{\tilde{\theta}}{\tilde{\theta}^d} = \frac{k_{p0} \frac{a_1}{s^2}}{1 + (k_{d0}s + k_{p0}) \frac{a_1}{s^2}}$$

$$\boxed{\frac{\tilde{\theta}}{\tilde{\theta}^d} = \frac{a_1 k_{p0}}{s^2 + a_1 k_{d0}s + a_1 k_{p0}}}$$

(c)

$$F_e = \frac{1}{2} m_2 g + m_1 \frac{z_e}{L} g \quad z_e = \frac{L}{2}$$

$$= \frac{1}{2} g (m_1 + m_2)$$

$$= \frac{1}{2} (9.81 \text{ m/s}^2) (2.35 \text{ kg})$$

$$F_e = 11.5 \text{ N}$$

$$|F| \leq F_{\max} \Rightarrow -F_{\max} \leq F \leq F_{\max} \quad F = \tilde{F} + F_e$$

$$\Rightarrow -F_{\max} \leq \tilde{F} + F_e \leq F_{\max}$$

$$\Rightarrow -F_{\max} - F_e \leq \tilde{F} \leq F_{\max} - F_e$$

This will be satisfied if

$$|\tilde{F}| \leq F_{\max} - F_e$$

Substituting,

$$|\tilde{F}| \leq 15 \text{ N} - 11.5 \text{ N}$$

$$\boxed{|\tilde{F}| \leq 3.5 \text{ N}}$$

(d) For a step in  $\theta^d$  of  $A_\theta$ ,

$$\tilde{F}_{\max} \approx k_{p\theta} A_\theta$$

$$k_{p\theta} = \frac{\tilde{F}_{\max}}{A_\theta} = \frac{3.5 \text{ N}}{(1 \text{ deg}) \left( \frac{\pi \text{ rad}}{180 \text{ deg}} \right)}$$

$$k_{p\theta} = 200 \frac{\text{N}}{\text{rad}}$$

(e) CLCE desired:  $s^2 + 2\zeta_0 \omega_{n\theta} s + \omega_{n\theta}^2 = 0$

CLCE actual:  $s^2 + k_{d\theta} a_1 s + k_{p\theta} a_1 = 0$

$$\omega_{n\theta} = \sqrt{k_{p\theta} a_1} \quad a_1 = \frac{L}{\frac{1}{3} m_2 L^2 + m_1 \tilde{z}_c^2}$$

$$k_{d\theta} = \frac{2\zeta_0 \omega_{n\theta}}{a_1} = 2\zeta_0 \sqrt{\frac{k_{p\theta}}{a_1}}$$

let  $\zeta_0 = 0.7$

$$\Rightarrow k_{d\theta} = 2(0.7) \sqrt{\frac{200}{a_1}}$$

$$k_{d\theta} = 10.4 \text{ s}^{-1}$$

(f) CL poles are roots of CLCE.

From Matlab,  $s_{1,2} = -13.8 \pm 18.4 \text{ rad/s}$

(g)

$$\frac{\tilde{z}}{\tilde{z}^d} = \frac{k_{p2} \left( \frac{-5/79}{s^2} \right)}{1 + (k_{d2}s + k_{p2}) \left( \frac{-5/79}{s^2} \right)}$$

$$\frac{\tilde{z}}{\tilde{z}^d} = \frac{-\frac{5}{7} g k_{p2}}{s^2 - \frac{5}{7} g k_{d2} s - \frac{5}{7} g k_{p2}}$$

(h) From block diagram,  $\tilde{\theta}^d \approx k_{p_z} \tilde{z}^d$

$$\tilde{z}^d = A_z = 0.25 \text{ m}, \quad \tilde{\theta}^d = -A_\theta = -1 \text{ deg}$$

$$\begin{aligned} \Rightarrow k_{p_z} &= -\frac{A_\theta}{A_z} \\ &= -\frac{1 \text{ deg} \cdot \frac{\pi}{180}}{0.25 \text{ m}} \\ \boxed{k_{p_z} &= -0.0698} \end{aligned}$$

(i) desired CLCE:  $s^2 + 2\zeta_z \omega_{n_z} s + \omega_{n_z}^2 = 0$

$$\text{actual CLCE: } s^2 - \frac{5}{7} g k_{d_z} s - \frac{5}{7} g k_{p_z} = 0$$

$$\omega_{n_z} = \sqrt{-\frac{5}{7} g k_{p_z}} = \sqrt{\frac{5}{7} \frac{A_\theta}{A_z} g}$$

$$\boxed{\omega_{n_z} = 0.699 \text{ rad/s}}$$

$$-\frac{5}{7} g k_{d_z} = 2\zeta_z \omega_{n_z}$$

$$k_{d_z} = -2\zeta_z \sqrt{\frac{7A_\theta}{5gA_z}}$$

$$\text{For } M_p < 5\% \Rightarrow \zeta > 0.7$$

$$\text{Let } \zeta = 0.75$$

$$k_{d_z} = -2(0.75) \sqrt{\frac{7(1 \text{ deg}) \left(\frac{\pi}{180}\right)}{5(9.81 \text{ m/s}^2)(0.25 \text{ m})}}$$

$$\boxed{k_{d_z} = -0.150}$$

(j) poles are roots of CLCE. From Matlab,

$$\boxed{s_{1,2} = -0.524 \pm j 0.462 \text{ rad/s}}$$
